

NASHUA, NH, November 08, 2013 /**24-7PressRelease**/ -- It seems like there isn't enough time in our days to get anything done. Our to-do lists are packed into our bags and pockets, but we never seem to check anything off. We get caught in this "busy" trap, and we let things sit on the back burner, like our oral health. Avoiding dental appointments because we're on a time crunch doesn't benefit us; but, when we need to see the dentist for cosmetic reasons, is it even possible to get something done in one day? Yes, thanks to Nashua CEREC same-day crowns and veneers.

"My practice's CEREC same-day crowns and veneers will fix patients teeth in one sitting, so they have the rest of the day to themselves. We have always provided quality dental care, and now we are making our dental treatments more time efficient," said Dr. LaRocque, Nashua cosmetic dentist.

With the use of computer-aided design/computer-aided manufacturing (CAD/CAM) technology, Dr. LaRocque promises single-day crowns and veneers for patients looking to get minor imperfections fixed while they wait. How does that work? Well, the CAD/CAM technology uses 3-D custom images to prepare same-day crowns or veneers. After capturing images of the patients' teeth, the crowns or veneers are drawn and designed. Dr. LaRocque takes great care to make sure restorations are of the highest quality. While some offices still obtain tooth models from conventional impressions, Dr. LaRocque doesn't need to take traditional impressions for single-visit crowns and veneers.

"We meet all of our patients' expectations, which is why I take into consideration whether some patients might need to have their crowns or veneers designed by some of the finest laboratories and technicians in our field. Not every tooth can be treated by CAD/CAM restoration technology. It's based on what you want and expect, and what I think will benefit you the most. It's all about satisfying your dental needs while focusing on an optimal esthetic look and oral health," asserted Dr. LaRocque.

At Robert J. LaRocque, DDS, MAGD, Dr. LaRocque invests countless hours to continuing education and state of the art technology. Dentistry techniques and technology are ever-changing, so he makes sure to stay ahead every step of the way. Other technology at Dr. LaRocque's practice includes 3D cone beam scanning, digital intraoral radiography, invisalign, rotary endodontics, Velscope oral cancer screening, soft tissue laser therapy and much more.

Don't let your teeth fall behind. Update your smile with the most modern technology by getting treated by one of the finest family and cosmetic dentists in Nashua, NH. To schedule an appointment, call (603) 883-6010 or submit an appointment request via Dr. LaRocque's
