

MISSION, Kan., Oct. 2, 2013 /PRNewswire-iReach/ -- ScriptPro announces that its [SP Central Pharmacy Management System Point of Sale](#) now interfaces with the Appriss NPLEx (National Precursor Log Exchange) system. NPLEx is a real-time electronic logging system used by pharmacies and law enforcement agencies in 22 states to track and control sales of over-the-counter (OTC) products that can be used to produce the highly addictive drug, methamphetamine.

The interface eliminates the need for pharmacies to maintain cumbersome manual logs to document sales of these OTC products. The system tracks product requirements, automatically alerts for entry of required patient identification data, sends back approval or denial, and blocks any transaction that would cause the purchaser to exceed legal limits set for the product.

The National Association of Drug Diversion Investigators (NADDI) makes NPLEx available at no cost to states that require monitoring of precursor purchases and agree to use the system.

"ScriptPro is pleased to partner with Appriss to offer this time-saving, and in some cases life-saving, tool to pharmacies operating in states that have adopted NPLEx. It reduces manual recordkeeping and saves operating costs for these pharmacies while at the same time providing better protection for the public," according to Mike Coughlin, CEO and President of ScriptPro.

ABOUT APPRISS: Appriss provides technology solutions to help agencies keep communities safe and informed. Since 1994, Appriss has provided innovative software-based services that help hundreds of local, state and federal criminal justice agencies keep communities safe and informed. Our various technology solutions range from automated victim notification (VINE®), our flagship service, to criminal justice information sharing, electronic document storage, protective order and court notification services, electronic citation and warrant systems and more.
