systems that treat intermittent flows of acidic or alkaline wastewater. As a process engineering service provider and a member of the Control System Integrators Association, Wastech Controls & Engineering has earned a reputation for providing their customers with consistent and reliable results. Their custom design and state-of-the-art turnkey systems in the areas of fluid/chemical handling,

[pH adjustment](#)

and process automation provide the ideal waste treatment systems for industrial and laboratory settings alike.

For batch neutralization or continuous neutralization operation for chemical labs in universities, high schools and research facilities, the LabDELTA™ Laboratory Neutralization Systems from Wastech are always ideal. Small automated packages from 2 gallon batches to 3 gpm continuous systems are processed efficiently and effectively with the LabDELTA™ system. Meanwhile, their OMEGA pH neutralization systems provides neutralization for up to 500 gpm flows. Even if a custom design is needed, Wastech can ensure precise acid neutralization is achieved for each individual industrial setting.

When dealing with potent, potentially hazardous chemicals, safety is always a primary concern. In these applications, Wastech provides LabDELTA™ EXTREME – a product that is specially designed to optimize safety. To further ensure safety, clients can take advantage of Wastech HelpNet™ for web-based maintenance support, allowing a knowledgeable Wastech maintenance engineer to see processes in real time without being on-site. Wastech engineers are fully capable of assisting in software tuning, as well as recommending methods of enhancing effectiveness. With Wastech HelpNet™, customers enjoy the benefits of having an engineer at the process, without having to worry about travel costs or delays.

With engineers specializing in industrial liquid processes and the integration of automation with piping and liquid handling components, sensors, transmitters and software, you'll likely find the exact systems you need at Wastech Controls & Engineering, Inc. However, as an industry

Laboratory and Industrial Clients Trust Wastech for World-Class Waste Treatment

Written by Australian Business

leader since 1987, Wastech professionals have also made exceptional service a chief priority. They are a client-oriented company that is large enough to design, build and deliver sophisticated control systems while remaining small enough to maintain a personal touch for academic and private clients alike.

The Wastech team consists of a number of experts in project management who are committed to ensuring their client's projects are delivered on time and on budget. That's why, it should come as no surprise that their list of satisfied clients includes distinguished and highly regarded companies like INTEL, Santur and Cypress Semiconductor. If you're seeking world-class pH adjustment, acid waste neutralization and handling among other industrial needs with a personal, client-focused touch, contact Wastech Controls & Engineering, Inc. by calling (818) 998-3500 or going online at www.wastechengineering.com.
