

[onthenetOffice is helping Colorado businesses rebuild their IT infrastructures for free.](#) ([PRLEAP.COM](#)) ANAHEIM HILLS,

Calif. – September 25, 2013 – Earlier this month, the state of Colorado experienced severe flooding that left cities in more than 17 counties devastated; President Obama declared a state of emergency for 15 of those counties. In the wake of the disaster, numerous businesses were destroyed, damaged, or otherwise affected. Today, onthenetOffice, a leading provider of hosted desktops and other hosted solutions, announced that they are extending an offer to those businesses affected by the flooding that would help them get back on their feet.

"Many businesses have already lost time and other precious resources to the flooding that occurred in Colorado," CEO Alexander Saca said. "In order to help those businesses, we are offering to rebuild their entire IT infrastructures for free; we are waiving the setup and migration fees usually associated with a new hosted desktop solution or other managed hosting services."

onthenetOffice's team of technicians will set up a secure, outsourced infrastructure for businesses affected by the flooding (including systems that are completely off-site and can be accessed through the cloud, or a combination of on-site and off-site systems). Once the infrastructure is up and running, onthenetOffice can assist businesses with recovering data that may have been lost during the flooding or in its aftermath and migrate that data to the business's new infrastructure.

Hosted solutions from onthenetOffice (which include hosted desktops, application hosting, server hosting, and website and email hosting) will provide Colorado businesses with a way to resume some of their everyday activities. A hosted solution will allow employees to work from home or any other location if their office building was damaged by the storm.

In addition to the resumption of daily activities provided by onthenetOffice's offer, there are several benefits associated with managed hosting services that will help businesses in the long run. First, technicians perform regular, offsite backups of clients' data so that if their on-site systems or devices are somehow damaged in the future, their data can be recovered quickly and easily. Additionally, all services come backed by 24x7x365 comprehensive technical support; are compatible with a range of operating systems and devices; are equipped with SMX Speed Technology (which allows users to launch applications in less than one second); and are extremely scalable, allowing for seamless growth of a business's infrastructure.

If your business was affected by the flood and you are interested in rebuilding your IT infrastructure for free, call one of our onthenetOffice sales representative at 1-855-668-4363 today to get started.
