( [PRLEAP.COM](http://PRLEAP.COM) ) Anaheim Hills, Calif. – October 10, 2013 – With debates about the financial details of the Affordable Care Act at the center of the government shutdown, there are still concerns about patient privacy pertaining to the act that patients and businesses want addressed. By choosing SACA Technologies' Managed IT Services, Orange County healthcare businesses (as well as businesses throughout Southern California) can ensure that their patients' private data is always secure.

"A compromised IT infrastructure and lost data can result in hefty fines, lost clients, and a damaged reputation, especially for healthcare-related businesses," SACA Technologies CEO Alexander Saca said. "SACA Technologies has a proven track record with helping businesses in the healthcare field protect the valuable and private data that they store at their offices. We have a number of security-related services that protect data from outside threats like hackers and spyware and ensure that data is not lost in the event of an IT-related disaster."

SACA Technologies offers their security solutions either as part of their comprehensive suite Managed IT Services or as an individual service, based on the clients' needs. Some of the security-related services that the outsourced IT Orange County provider offers include:

**Network monitoring:** A team of technicians monitors clients' networks for suspicious behaviors or events that could lead to a data breach such as unauthorized access, visits to suspicious sites, or unusual receptions and transmissions of data.

### **Antivirus**

#### **software and malware removal**

: Automated scans reveal any security threats (viruses, worms, spyware, Trojans, etc.) so that technicians can remove them before they affect your systems or data.

#### **Access controls**

: SACA Technologies can install login interfaces and firewalls on your infrastructure that limit access to authorized users. This protects your infrastructure from hackers.

#### **Data backups**

: Technicians perform regular backups of clients' data so that it can be recovered quickly in the event of an IT-related emergency. "By signing up for any of SACA Technologies' security solutions, businesses no longer have to worry about performing tedious but necessary security tasks such as antivirus software updates and firewall installations on their own," Saca said. "The proactive solutions we offer will dramatically improve your business's IT security and decrease the occurrences of security threats and data loss."

SACA Technologies is a provider of comprehensive IT services, which includes outsourced IT, Orange County, Los Angeles County, Riverside County, San Bernardino County, and San Diego County businesses have relied on for more than 15 years. Their comprehensive suite of IT solutions (known as managed IT services) includes around-the-clock network and performance monitoring, data backup & disaster recovery, fixes & repairs, security and alerts & reporting. SACA Technologies also offers professional services such as IT service & support, sales & procurement, security and virtualization services.
