

Stem Cell Orthopedic Warns Against Bad Medical Advice from Uninformed Doctors

Written by Australian Business

(PRLEAP.COM) Boca Raton, FL – Dr. Joseph Purita, head of the Institute of Regenerative and Molecular Orthopaedics (IRMO) and [world-renowned stem cell therapy expert](#)

, warns against bad medical advice from doctors ill equipped to properly administer regenerative medicine. This phenomenon is common among physicians that seek to utilize the efficacy of certain stem cell treatments, without fully engaging the latest scientific understandings of the relatively new technology. This underscores the importance of patients seeking only noted stem cell therapy experts when considering regenerative medicine options.

Inspired by a recent interaction with a patient, Dr. Purita learned of a doctor who was reportedly performing unnecessary and misguided stem cell and platelet rich plasma (PRP) treatment procedures. Dr. Purita contacted the physician and quickly realized that he had a strikingly minimal understanding of the field. The misinformed doctor promised the patient that he was using live cells from the placenta, when in fact the extracts being used were not alive. As such, the cells could not reproduce.

Stem cell and PRP therapy is of the most promising treatments in modern medicine, with its ability to exponentially increase recovery time and regenerate cells in ways that were previously impossible. Though, the proper use of this new technology currently requires the sure hands of experts to maximize its full potential and minimize unnecessary applications. This fact has compelled Dr. Purita to issue his warning to patients across the nation and around the world.

The Institute of Regenerative and Molecular Orthopaedics is dedicated to advancing the scientific understanding of stem cell therapy and its many functions in the medical field. They stand as one of the few orthopedic practices on earth that uses stem cell and PRP therapy in conjunction with traditional orthopedic surgery.

As a pioneer and renowned expert in stem cell and PRP therapy, Dr. Purita encourages patients to exercise caution when doctors offer stem cell treatments, and he invites interested parties to visit the IRMO's website today for more information on the latest in regenerative medicine, types of conditions treated, and more.

About Stem Cell Orthopedic: The Institute of Regenerative and Molecular Orthopaedics (IRMO) is a world-class orthopedic practice and stem cell facility staffed with seasoned board certified orthopedic surgeons. They differ from most orthopedic practices because they offer stem cells

and platelet rich plasma (PRP) therapy in conjunction with surgery or as alternative to surgical procedures. They utilize state-of-the-art technology and the latest in stem cell research to best treat their patients. IRMO uses hematopoietic stem cells (HSC), which are found circulating in blood, fat, and bone marrow, to help repair the body. They are headed by Medical Director, Dr. Joseph Purita, a world-renowned pioneer in laser orthopedic surgery and graduate of the esteemed Georgetown University Medical School.
