) CAI Safety Systems, one of the leading providers of turnkey fall protection systems, now offers clients on-site installation of their custom designed fall protection system. The installation service includes a comprehensive assessment of the client's fall protection needs, review of existing safety processes and complete, turnkey installation. The first step is to perform site survey and assessment which will form the basis for a comprehensive fall protection plan.

The initial on-site visit by [CAI Safety Systems specialist provide an opportunity](#) to note all existing conditions, interview on-site personnel, and document potential fall hazards. A written report is then provided to the executive committee detailing the challenges of existing applications. All options of the fall protection hierarchy including elimination, fall prevention, fall restraint, and fall arrest will be evaluated for every client's specific safety and work needs.

Following this process, CAI will breakdown the benefits and drawbacks of each option, provide budgetary pricing for design, fabrication, installation, and training for all proposed options. CAI Safety Systems experts work with clients to answer all questions and in necessary make revisions to the fall protection plan to be ensuring the highest level of safety, OSHA compliance as well as cost-efficiency.

Lastly, CAI team will professionally install all fall protection equipment on site and test for effectiveness.

To request an initial consultation for on-site fall protection system installation, visit <http://caisafety.com/>
