

Extend the Life Cycle of Your Technology with Managed IT Services from SACA Technologies

Written by Australian Business

(PRLEAP.COM) Anaheim Hills, Calif. – December 23, 2013 – These days, businesses want to make sure that their IT resources last as long as possible. IT Support Orange County provider SACA Technologies offers its clients a way to extend the life cycle of their technology: Managed IT Services. Orange County, Los Angeles County, Riverside County, San Bernardino County, and San Diego County businesses have all experienced an increase in the longevity of their IT by relying on SACA Technologies.

"Our comprehensive suite of Managed IT Services is designed to keep our clients' IT infrastructures running efficiently," SACA Technologies CEO Alexander Saca said. "Hardware that is well maintained and equipped with the latest security features will perform at its optimal level, which means that it will last much longer than hardware that is not maintained and insecure."

The IT Support Orange County providers include regular, automated system updates and around the clock performance monitoring as part of their Managed IT Services; Orange County businesses can rest assured that their IT resources will always run at an optimal level. As the name performance monitoring suggests, SACA Technologies technicians watch a business's system to ensure that its devices are performing as they should be (an underperforming device will not last as long). Additionally, regular updates make sure that any new software patches that will improve performance are implemented.

Lax security almost guarantees that a business's hardware will not last as long as it could. SACA Technologies also provides the latest and best security features to protect its clients from security threats such as hackers, malware, spyware, and viruses. Some of these security features include 24x7x365 network monitoring (technicians are trained to identify and remove potential threats to a client's network), access controls, antivirus software and malware removal.

Businesses that want to ensure that their IT resources last as long as possible (thereby saving themselves a lot of money) should call a SACA Technologies sales representative at (888) 603-9030 to discuss the life cycle-enhancing Managed IT Services suite today.

About SACA Technologies

SACA Technologies is a provider of IT support Orange County businesses (and businesses throughout Southern California) have relied on for more than 15 years. Managed Services (their

most popular solution) is a comprehensive suite of IT solutions that includes infrastructure monitoring, security, computer fixes & repairs, disaster recovery, alerts & reporting and automation.
