

## Utilize Enclosed Vehicle Shipping With CarCaddy

Written by Australian Business

---

( [PRLEAP.COM](http://PRLEAP.COM) ) National auto transporter, [CarCaddy](http://CarCaddy) , is offering enclosed vehicle shipping with their renowned door-to-door service. Along with open shipping, this gives customers the two most affordable and popular car shipping methods.

Enclosed vehicle shipping utilizes a stacked or non-stacked trailer with a fully enclosed top and sides. Generally, there are multiple cars on each trailer, so that CarCaddy can minimize customer costs. Each car is loaded using a lift-gate that carefully places your car in position while keeping it completely level. The vehicle is then secured with soft-tie straps on each tire. The same technology unloads the car.

Enclosed vehicle shipping is recommended for low profile cars that sit three inches or closer to the ground. Types of vehicles that often use this service include classic and luxury cars. It can also be used for motorcycle and boat shipping. The main benefit of enclosed shipping is the safety of your car. There is no exposure to weather, road debris, or other damaging elements. Customers save on gas expenses and may track their car with CarCaddy's top-of-the-line technology.

CarCaddy states that, "enclosed car shipping is ideal for those who want to move their car across the country or city without worrying about its condition. There is also no mileage added to the vehicle, which saves you maintenance issues from long journeys. We are happy to recommend this service to our customers and enjoy helping each person find a little security while moving." If you would like more information about enclosed vehicle shipping, or to receive an auto shipping quote, CarCaddy can be contacted via telephone or online.
