

onthenetOffice Offers Superior Windows 8 Experience Enhanced by SMX Speed Technology

Written by Australian Business

(PRLEAP.COM) Anaheim Hills, Calif. – January 16, 2014– With Microsoft's imminent discontinuation of free support for Windows XP, the thousands businesses still utilizing the operating system have several options available, including replacing their Windows XP-based computers with newer devices that run more current operating systems; this option, however, can be quite costly and is not financially feasible for many small and medium sized businesses. Or, businesses could go with a more cost-effective, hassle-free option: migrating to a Windows 8 Hosted Desktop solution from onthenetOffice.

"When support for Windows XP ends on April 8, businesses that have not upgraded to a newer operating system will be subject to a lot of negative consequences such as an increased risk of hacking and malware, higher levels of downtime, costly support fees and poor IT resource performance," onthenetOffice CEO Alexander Saca said. "onthenetOffice Windows 8 Hosted Desktops are the perfect solution for businesses that are looking to migrate to a new operating system; businesses save a lot of money because they can use their current devices to access their Windows 8 desktops and, because our technicians handle everything, the migration process is quick and seamless."

Businesses that choose a Hosted Desktop solution from onthenetOffice can rest assured that their Windows 8 experience will be superior to those provided by other hosted solutions providers because onthenetOffice Hosted Desktops are equipped with performance-enhancing SMX Speed Technology.

"SMX Speed Technology is onthenetOffice's speed and performance-enhancing feature that allows us to deliver the highest-quality desktop experience to our clients," Saca said. "SMX Speed Technology enhances the performance of our Hosted Desktop platform without compromising security, uptime or cost-effectiveness."

Some of the benefits associated with SMX Speed Technology include: applications that launch in less than one second; consistent performance and speed regardless of what device the customer is using; a desktop that is faster and more responsive than any other desktop on the market; and optimized video and audio streams.
