([PRLEAP.COM](#)) The new DynaClean™ line of reconfigurable food grade conveyors manufactured by Dynamic Conveyor Corporation of Muskegon, Michigan is engineered to fulfill the need for custom food grade conveyors that are easy to clean, energy efficient and reconfigurable.

The DynaClean line is designed and built to meet NSF, FDA, USDA and BISCC standards. DynaClean food processing conveyors are fabricated with chemical and corrosion-resistant plastic, stainless-steel and driven by Rulmeca's 113LS Motorized Pulley. DynaClean conveyors are engineered for speedy assembly and disassembly that allows for conveyor reconfiguration when processing needs change.

Utilizing the hermetically-sealed Motorized Pulleys allows customers the ability to clean and sanitize to an optimal level in less than half the time it takes to clean a typical geared motor or conventional exposed drive.

The food conveyors include removable retaining walls that ensure quick internal access and easy cleaning without tools. Utilizing DynaClean food processing conveyors allows food processors the opportunity to increase profitability while reducing carbon emissions, water consumption and waste water.

"Our goal is to provide our customers with safe, easy to clean and reconfigurable food grade conveyors. The Rulmeca Motorized Pulley met our needs when it came to selecting a power unit because it is easy to clean, self-contained, and fits well with our reconfigurable platform. Its low energy consumption and overall hygienic design are real benefits to our customers" said Paul Kuharevich, Engineering Manager of Dynamic Conveyor Corporation.

Recent DynaClean installations using the Rulmeca Motorized Pulley include conveying raisins at a national bakery, and multiple conveyors for a global sandwich supplier. Dynamic Conveyor is Rulmeca's first major US OEM to incorporate the newly developed 113LS into a new conveyor product line.
