

Federal Trade Commission Requires Third Party Verification on All Telecom Service Changes

Written by Australian Business

(PRLEAP.COM) AGOURA HILLS, CA – The Federal Trade Commission has mandated that all telecom service changes must be performed through a third party verification service in order to prevent fraud and ensure accuracy.

These laws are a response to potential concerns that telecom providers may take advantage of individual consumers by charging users for services that they did not consent to, giving the consumer recourse in the event that they do have a dispute with the larger entity. These stipulations also protect Telecom providers from users that may provide inaccurate or fraudulent data or in other ways try to take advantage of the system, and as such 3rd party verification is now required in most instances where any form of remote, legally-binding verification is necessitated. These laws have led to a rise in demand for reliable, affordable third party verification companies that can accommodate the specific needs of individual providers.

[Direct TPV](#) is a full-service verification solutions provider that has been used extensively by call centers and the telecom industry, debt collections and credit card agencies, cable providers, infomercial sales, and more. They are equipped to provide a wide variety of third party verification services including, but not limited to, automated script recording, call auditing, and detailed real-time reporting.
