

(PRLEAP.COM) DALLAS, TX - January 23, 2014 – As 2013 comes to a close, industrial parts washers manufacturer Torrent and their parent company [Partsmaster](#) would like to reflect upon all of their achievements from the last year and look forward to everything that is coming in 2014.

This year many new clients decided to make the switch to aqueous parts washers including an electric motor shop, an oil field fleet service, railroad DSL shop, aviation brake and wheel repair shop, heavy equipment shop, and a well servicing company. All of these businesses will save thousands of dollars a year thanks to the efficiency of the Torrent, with the well servicing company estimated to save over \$100,000/yr and the railroad DSL shop estimated to save an astonishing \$600,000/yr. "In 2013 we set the stage and look forward to a solid 2014 supporting our current customers and growing accounts to help more companies save money, time, and the environment with aqueous parts washing," said Curt Selby, Marketing Director.

In addition to those industries already mentioned, the Torrent has been effective in reducing costs and increasing productivity in the aerospace, manufacturing, and material handling fields, amongst others. The Partsmaster Torrent complies with all OSHA standards, helps achieve ISO 14001 goals and objectives, and is frequently used to replace many older-model, less efficient washers as users realize their broad-spectrum applicability and bottom line impact.

To learn more about the Torrent, or to send a message to Partsmaster, visit the website. You can also speak to a Partsmaster representative directly by calling (800) 336-0450, or view more online content on their YouTube, Facebook, Google+, or Twitter pages.
