

( [PRLEAP.COM](http://PRLEAP.COM) ) Anaheim Hills, Calif. – January 23, 2014– Despite the fact that some experts are still predicting that millions of PCs will be sold this year, it is undeniable that PC use and sales have steadily declined over the last few years, thanks in large part to mobile devices such as tablets and smartphones. Businesses looking to remain competitive in the coming years will need to find ways to integrate mobile technology into their everyday business practices, whether that is adopting mobile payment options, integrating a mobile marketing strategy or allowing employees to use their own devices for work-related purposes.

"It's undeniable that mobile technology has already had major impact on how we do business, and will continue to do so in the coming years," SACA Technologies CEO Alexander Saca said. "Like any revolutionary technology, however, mobile technology can be difficult for small and medium sized businesses to integrate and manage. Those SMBs looking to utilize mobile technology should turn to their IT Allies at SACA Technologies."

The comprehensive managed services offered by the computer support Orange County provider are the perfect solution for businesses looking to seamlessly integrate mobile technology into their existing business strategies. Some of the services included in the Managed Services suite that will be most beneficial to businesses looking to create a mobile technology plan include:

**IT Security.** Mobile devices can open a business up to a slew of additional IT security risks (mobile device theft, malicious apps, attacks specifically geared toward mobile devices, etc.). The security solutions provided by SACA Technologies are meant to protect a business's IT infrastructure from all kinds of outside threats using controls such as firewalls and access controls to limit access to a business's data, as well as antivirus software and malware removal that guard against viruses, worms, Trojans, etc.

**Technical Support.** The technicians employed by SACA Technologies have the skills and knowledge to make repairs to any kind of device a business might use, including smartphones, tablets, and other mobile devices.

**Disaster Recovery.**

SACA Technologies offers its clients a comprehensive data recovery and business continuity plan. Data backups are performed regularly, so even if something happens to a business's onsite technology, employees can still access their data using their home or mobile devices.

**About SACA Technologies**

SACA Technologies is a provider of computer support Orange County businesses have relied on for more than 15 years. They serve clients throughout Southern California, including businesses in Anaheim, Los Angeles, Riverside, San Diego, San Bernardino and Irvine.
