

(PRLEAP.COM) Anaheim Hills, Calif. – January 24, 2013 – Every year, the networking equipment giant Cisco prints its annual security report. The 2014 Annual Security Report verifies what many business owners have probably already realized: that cyberthreats have continued to grow stronger and more complex over the last year. It goes on to assert, however, that because of the extreme sophistication of new cybercrimes, businesses need to be vigilant about verifying any links or files sent to them.

"The idea that cybercrime has become much more sophisticated is not really shocking," SACA Technologies CEO Alexander Saca said. "What this study makes clear, however, is the fact that innovative forms of technology like cloud computing and mobile devices are creating more opportunities for cybercriminals to attack; and because these technologies are more complex, the cyberattacks have also evolved to become more sophisticated."

Businesses that want to remain competitive by integrating mobile technology but do not want to compromise their IT security should make sure they choose SACA Technologies for their security needs. With the security services offered as an individual service or as part of SACA Technologies' comprehensive managed IT services, Los Angeles businesses (and businesses throughout Southern California) will receive some of the best security features available for mobile devices. These stringent security measures include:

Network Monitoring. The technicians employed by SACA Technologies monitor a business's network 24x7x365 and are trained to look for all kinds of threats, even newer, more sophisticated attacks.

Access Controls. Login interfaces and firewalls limit access to a business's system to authorized users only.

Antivirus Software and Malware Removal.

Once a virus, Trojan, rootkit, spyware, ransomware, or any form of malware is detected, SACA Technologies technicians can ensure that it is removed so that it doesn't cause any damage to your system. The security solutions offered by the managed IT services Los Angeles provider are so thorough that they will protect your mobile fleet from even the most sophisticated security threats.
