

[Netrepid is one of North America's top 100 MSP hosting service providers.](#) ([PRLEAP.COM](http://PRLEAP.COM)) Netrepid

and LowV Systems announced today they will be presenting the latest in hosted video surveillance solutions at INTERPHEX 2014 to show companies in the pharma and biotech industries how they can improve their security technology at a scalable cost without the need for increased manpower.

For decades, companies of all sizes and in numerous industries have been storing surveillance and security footage the old fashioned way - on CDs, DVDs, or in some cases - still on VHS tapes. While companies using outdated technology for their video surveillance have not taken forward steps, today's leading security and surveillance systems can integrate access control, camera surveillance, networking and cloud services into a single solution.

Combining these technologies together allow companies in the pharma and biotech industries the ability to focus on their business and main growth areas, while also:

Improving their surveillance and security processes  
Deploying new technologies on a low risk platform  
Maintaining a scalable cost structure relative to their needs  
Reducing required manpower and service calls  
"For companies looking to improve their IT infrastructure in any area, evolving to the cloud is really the most cost effective option right now," said Sam Coyl, President/CEO of Netrepid. "Both of our companies have already begun deploying solutions like what we will be presenting at INTERPHEX, and we look forward to continued partnership opportunities.

At INTERPHEX 2014, both Netrepid and LowV Systems will be located in Booth #1565. The companies will have a TV in their booth presenting live video access of IP cameras presented from a hosted desktop. To schedule an appointment to meet representatives from Netrepid and LowV Systems at INTERPHEX 2014, please visit [netrepid.com/interphex-2014/](http://netrepid.com/interphex-2014/) .

**About Netrepid** Founded in 2004, Netrepid is a provider of infrastructure hosting services that help growing companies accelerate their technology evolution from the ground to the cloud. One of North America's top 100 MSP hosting service providers, Netrepid privately owns and operates an 8000-square foot, Tier 3-quality, HIPAA and PCI-compliant data center located in Harrisburg, PA. From the data center, Netrepid is able to provide its direct clients and network of partner-resellers a wide array of subscription-based technology solutions ranging from cloud services to server colocation and virtualization. Netrepid creates a relationship that allows them to become a part of the team for their clients, partners and resellers - not just a vendor. This strong relationship based culture enables Netrepid to provide quality advice, support, and direction to their clients as they match technology to their business.
