) April 15, 2014 - PostmanMojo.com just crossed the international date line and have installed Mojo Servers on Australian Shores. We have just launched new servers at the new RackSpace Datacenter in Downtown Sydney. Our Kerio Connect servers have been customized with the same "Mojo Magic" as our US based servers and can be scaled infinitely, in the same fashion.

All of our Aussie Servers are in compliance with the Australian Privacy Laws and are also bound by the tough European Union Spam & Virus filters we apply on every server we load into our worldwide network. PostmanMojo can now provide our super fast and rock solid PostmanMojo Email to Australia, Tasmania & New Zealand. PostmanMojo has built Simple Enterprise Email for Small & Medium Business.

Small businesses now can have real time, cross platformed synced & secure business email, contacts, notes, reminders, tasks & calendars. Allowing both Mac, Android & PC Users to seamlessly sync your business information without Hosted Exchange or Google Apps for Business. PostmanMojo is based in Silicon Valley, and we have developed an efficient, FAST, scalable alternative to Managed Exchange based on the Kerio Connect system.

We have live servers hosted in Sydney.
