( [PRLEAP.COM](http://PRLEAP.COM) ) June 13, 2014 - Macomb, MI - Memorial Day has come and gone, so summer is officially underway. No time left to wonder how to keep the family busy this season! Noodles are popular at the pool and on the beach, but unfortunately these only come in one size at local mega-marts. Lucky for you, Foam By Mail offers a variety of [foam cylinder](#) "noodles" in a multitude of lengths, diameters, and colors.

Customers can even request custom lengths or that the cylinders be halved long-ways for special purposes, such as building a raft or designing a unique water toy. Now everybody can have a noodle perfect for them and the way they enjoy playing in the water! These foam cylinders are 2.2-pound density and made of durable, easy-care, closed-cell polyethylene.

In addition to the noodles, Foam By Mail offers a variety of foam products in all shapes, sizes, and colors, and will gladly cut these into custom shapes for the kids to have their very own floaties — unlike any others seen at the beach or pool! These are ideal for the little ones, who like all of their personal things to be in their favorite shape and color.

Foam noodles are an ideal toy to carry to the beach because they are lightweight, non-absorbent, and extremely buoyant. They fit easily into the car or van, and even the smallest children can tote these to the water by themselves. Foam also holds up far better than inflatable floating devices, which tend to puncture and deflate when squished in a crowded vehicle with picnic baskets and fishing gear.

Shop the incredible selection of foam products at [Foam By Mail](#) to find the ideal solution to any swimming or water play needs this summer. These products are designed for recreational purposes only, and are not intended as or appropriate for lifesaving flotation devices.

Bio: Foam By Mail began as a small, family owned business more than 30 years ago. Today, it has grown into a 310,000 square-foot facility in Southeastern Michigan, providing foam products to customers around the world. Their investment in the latest technologies allows them to
