

( [PRLEAP.COM](http://PRLEAP.COM) ) July 1, 2014 - [Auburn, Georgia-based Progressive Business Systems](#) is pleased to announce the initiation of a 14-day limited free trial for prospective users of the Wycom Enterprise Laser Check Printing System and Wycom Enterprise Check Signer. The trial provides PBS clients with the flexibility to use either of these systems for two weeks without an upfront cost, ensuring that their capabilities are fully understood before a longer-term commitment is made.

"To ensure our clients' complete satisfaction, we will provide a full production installation of our [Wycom Check Signing](#) and/or [Wycom Laser Check Printing](#) solutions to try at no obligation," says Cliff Hagan, Vice President of Client Relations at Progressive Business Systems.

"Our goal is a long-term relationship with our clients, and this trial period will ensure that they are completely happy with their choice before purchasing the Wycom system," Mr. Hagan adds.

PBS clients who choose to utilize the 14-day trial period will not be required to pay the cost of their chosen Wycom system until after the period's conclusion. This offers an opportunity to try the Wycom solution of your choosing. Although Progressive Business Systems already offers prospective clients access to testimonials from current users of these devices, the company expects the trial period to improve customer satisfaction even further.

The Wycom Enterprise Check Signer works seamlessly with existing accounting systems to provide one-step check signing for its users. It includes several important security features, including total control over which checks are signed and a user-generated dollar limit that prevents larger checks from being signed automatically.

The Wycom Enterprise Laser Check Printing System is [capable of laser printing every element of a secure business check](#), including its outlines, MICR bank numbers, signatures and any attached corporate logo. It requires no software installation and stores all pertinent data in encrypted form to maximize security. This solution completely eliminates the need for businesses to rely on preprinted check stock. Users of the system eliminate check storage security issues and no longer need to reorder new checks should an address or account number change. These changes are made electronically and quickly.
