[GL Roberson, CPA, PLLC](#)

is Celebrating 5 years of service and continues their commitment to offer the latest in accounting solutions.

Traditionally, accounting functions for small businesses are tracked using books, files, and other paper-based methods. However, the speed at which companies do business has led to a shift away from traditional accounting methods. GL Roberson, CPA, PLLC has performed services for diverse clientele over the last five years; doctors, plumbers, non-profit entities and multimillion dollar wholesale distribution companies.

As firm owner, Gary L. Roberson, CPA explains, "Over the past 30 years, I have watched the need for [accounting technology](#) become more essential for businesses. Even small business owners find that my service quickly automates their accounting functions and sets them apart from the competition. While working with my clients to help them streamline their accounting functions and reach their financial goals over the last five years, I have discovered that many small business owners rely on my technological support services. The benefits from the use of accounting software outweigh the cost to obtain it. My goal is to continue to help meet those needs for existing and new clients."

GL Roberson, CPA, PLLC has recently introduced services for a number of commonly used accounting software programs, including Sage 50/Peachtree, Sage DacEasy, Sage Timeslips, and QuickBooks.

As many small business owners are not certain which type of software is best for their needs, Gary's firm offers initial consulting and several Chief Financial Officer services where small business' needs are carefully evaluated, analyzed and solved. Once Roberson and his team understand the business, a software package is then recommended. The firm handles installation of the software and provides training for all staff members who will utilize the software on a daily basis. Ongoing support is available to assist businesses as they transition to

the software and use it to perform key accounting functions.
