

WALL TOWNSHIP, N.J., Sept. 12, 2013 /PRNewswire/ -- **Coates International, Ltd.** (OTCQB: COTE) —

Coates International, Ltd. and Coates Hi-Tech Engines, Ltd. (the "Companies") have signed commitment agreement letters with an American power company in Colorado

on

September 11, 2013

to develop and manufacture industrial water to hydrogen CSRV electric power generators that will be manufactured in the USA

.

Management Comments, "We are pleased after a year of negotiations that the Companies have come to an agreement to go forward with this project. We already have the industrial CSRV engines and generators ready to go into production. The second phase with the water to hydrogen H2 reactor will be completed with another company that is involved in the deal. The names of the Companies will be divulged when all agreements are executed."

Mr. Coates comments, "We have engines operating on water split into hydrogen H2 by a Coates water to hydrogen H2 reactor. The second phase of the project has started already and I believe the best possible thing that our Company could do is to join forces with American companies in this project. There are seven American power companies involved. I feel extremely confident that we have all the components and science for success. I am convinced that this technology could make the USA independent of foreign imported oil, create many new jobs and help boost the US economy. I am looking forward to this challenge. The most abundant power on this planet is contained in water."

There can be no assurance that the Companies will be successful in any and all of their

endeavors.
