

LONDON--( [BUSINESS WIRE](#) )--euNetworks Group Limited (SGX: 5VT.SI), a unique bandwidth infrastructure provider, today announced it has launched a Fibre based solution from London to Stockholm, with dedicated low latency dense wave division multiplexing (DWDM) technology delivering market leading latency. euNetworks first began offering ultra low latency services to Stockholm in 4Q 2010.

euNetworks has also added Moscow to its euTrade service portfolio, connecting from Moscow back to London on its dedicated finance network. This route also launches with market leading latency, offering a round trip performance of 38.19 milliseconds (Interxion London data centre to M1 Moscow MICEX colocation area) with further optimisations planned. The offer of low latency cross-connection in the M1 facility to MICEX also overcomes a significant obstacle for many customers.

Such network investment demonstrates euNetworks' commitment to this important market, following strong demand from its financial services customers and also the Company's industry leading deployment capability, reducing the previous leading latency on the London to Stockholm route by 5%. The straight point-to-point route from London to Stockholm offers a round trip time of less than 21 milliseconds.

“Demand for low latency connectivity to Stockholm continues to increase, prompting our fibre investment on this important route,” said Brady Rafuse, Chief Executive Officer of euNetworks. “The addition of Moscow means that today, euNetworks delivers leading low latency euTrade services across our London Metropolitan network, through to Slough and Basildon, to Frankfurt, Stockholm, Zurich, Milan and Moscow, directly to multilateral trading facilities (MTFs). We continue to see great success and strong growth from our euTrade service portfolio, and as a bandwidth infrastructure provider, we will continue to invest to deliver the network performance that our clients need to maximise their business potential.”
