

(PRLEAP.COM) Anaheim Hills, Calif. – August 13, 2013 – For more than 15 years, SACA Technologies has been a leading IT services provider for businesses throughout Southern California (including, but certainly not limited to, Santa Ana, Los Angeles, Riverside, Palm Springs, and Irvine). Managed Services, IT Security, Monitoring, and Fixes and Repairs are some of the solutions offered by the IT Services provider. Unlike many competitors, however, SACA Technologies also offers Hosted Solutions.

"At SACA Technologies, we know that our clients need to be on the cutting-edge of technology in order to stay competitive in the business world," CEO Alexander Saca said. "Businesses that have signed up for our hosted solutions have seen drastic improvements in their IT infrastructure."

While other IT service providers only offer niche solutions (e.g. Irvine Managed Services, Riverside Computer Repairs, San Bernardino Hosted Solutions, etc.), SACA Technologies offers all of the most popular IT services so that clients can configure a solution that works for them, including SACA Technologies' unique combination of Hosted Solutions and Managed IT Services.

"By combining one of today's most in-demand services with our Managed Services, we can deliver the kind of high-quality, dynamic solutions our clients have come to expect from us," Saca said.

By selecting a solution that combines Managed Services with Hosted Solutions, businesses ensure that whatever Hosted Solution they choose (hosted desktops, hosted applications, Infrastructure as a Service, dedicated server hosting, etc.) will not only be tailored to meet their company's unique needs, but will be backed by a dynamic solution that includes:

Around-the-clock performance monitoring
Security features such as security monitoring, content filtering, intrusion prevention and patch management
Routine integrated data backups
A dedicated team of experts who are available 24x7x365 to help clients with any issues that may occur
These features of SACA Technologies Managed Services ensure that a business's Hosted Solution is always performing optimally, protected from any potential threats, and always available.

SACA Technologies has provided a comprehensive suite of IT services Los Angeles County and Orange County businesses (as well as businesses throughout Southern California) have relied upon for more than 15 years. Their solutions include Managed IT Services, IT security, hosting services and computer repair. Thanks to a combination of remote, phone-based and onsite technical support, technicians are available 24x7. For more information, visit www.sacatech.com
