

(PRLEAP.COM) Anaheim Hills, Calif. – August 16, 2013 – Computer networks are vital to running a business. A broken or under-performing network can negatively impact a company's productivity, affect clients' perception of the business and even affect the business's bottom line. On the other hand, effective maintenance of a network requires diligent, around-the-clock management and support and most people do not have the skills and training required to install, maintain and secure a business's network. As their clients IT Allies, the technicians at SACA Technologies are dedicated to making sure every aspect of their IT infrastructure is running optimally and efficiently. In order to ensure that their clients' networks are always performing efficiently, the IT service provider offers monthly network support services.

"Our monthly network support services are a comprehensive, proactive solution designed to keep your business's network secure and working efficiently," SACA Technologies CEO Alexander Saca said. "Our goal is to prevent major network issues in the future that could be damaging to your business's bottom line, as well as reputation."

The SACA Technologies monthly network support services (which are included in their Managed IT Services) feature around-the-clock network security and performance monitoring. A dedicated team of experts is trained to watch for and resolve any event or behavior that might affect a network, such as poor performance, security breaches, unauthorized access, unusual transmissions or receptions of data, expiring warranties and visits to inappropriate websites. Other features of SACA Technologies' monthly network support services include intrusion detection and prevention systems, antivirus software, SPAM blocker and a content filter.

When a client chooses SACA Technologies as their monthly network support services provider, they can rest assured that they are getting the best quality solutions because many of SACA Technologies' technicians possess network-related certifications such as CompTIA Network+, CompTIA Security+, Cisco Certified Network Professional (CCNP) and Microsoft Certified Systems Engineer (MCSE).

Business owners and managers looking to get the most out of their company's computer networks should select monthly network support services from SACA Technologies. Unlike other service providers who merely fix existing network issues, SACA Technologies provides proactive solutions that are designed to keep their clients' networks performing efficiently so that they do not require major repairs down the road.

For more than 15 years, SACA Technologies has provided a comprehensive suite of IT services to businesses in throughout Southern California, including Orange County, Riverside County

and Los Angeles; computer repair, virtualization services, hosting services and Managed IT Services (which includes monitoring, disaster recovery and automation) are just some of the solutions they offer. Thanks to a combination of remote, phone-based and onsite technical support, technicians are available 24x7. For more information, visit www.sacatech.com.
