( [PRLEAP.COM](http://PRLEAP.COM) ) Halogen Bulbs have been the popular choice of bright lighting in the home for many years, but that is set to change as **Energy Bulbs** can now report LEDs to have taken over as the top selling bulbs for domestic use. LEDs offer significantly lower energy use and have therefore become more and more commonplace in the home as the need to save money increases. With UK-wide delivery, Energy Bulbs are offering an extensive range of LED bulbs all available to buy immediately online.

Many of us have fallen in love with the halogen bulb over the past few years, and it is for a very good reasons. They look great once installed and fit flush with the ceiling and give out absolutely masses of light at the flick of a switch, yet equally so they can be used as fantastic mood lighting as the majority of them can be used with a dimmer switch.

However if you are like the people at EnergyBulbs.co.uk then you will also be aware that in providing such high volumes of light they do so at a cost your electricity bill, as in general most halogens are 50 W's or more. The good news is that the people running energy bulbs.co.uk may be able to help you out in reducing the running costs of your lights, and replace your halogen bulbs which tend to be in a common GU 10 fitting, with an equivalent LED light bulb.

Indeed it is the GU 10 fitting that is the most widely used amongst halogen bulbs. The good news is that [energybulbs.co.uk](http://energybulbs.co.uk) stock a vast range of replacement LED bulbs all with GU 10 fittings, meaning that you can very easily replace all of your energy hungry halogen bulbs with very low energy LED light bulbs, and as LED light bulbs only use 15 to 20% of the electricity then energybulbs.co.uk can assure you of a big reduction in your electricity bill if you make the switch.

The importance of the cost saving that using GU 10 LED bulbs can bring to you should not be overlooked, particularly in a commercial setting whereby you may have a shop with a large number of halogen bulbs turned on all day, which can run up a large bill as well as actually making the inside of your shop hotter due to the heat output of the lights. Energy Bulbs would point out that by fitting replacement GU 10 LED light bulbs you are not only greatly reducing your shops electricity bill, but also you will spend far less on air conditioning as [LED bulbs](#) are cool to the touch and emit virtually no heat whatsoever. So just by fitting them you are actually not only saving money on electricity for lighting, but also improving your customer environment as well as spending less on electricity for air conditioning.
