

MILWAUKEE, Oct. 16, 2013 /PRNewswire/ -- Demanding industries demand the best. Spectralink's new WiFi and DECT phones are ready to heed the call. These new VoIP phones are durable, standards-based handsets, featuring innovative safety protocols and productivity tools for industries ranging from healthcare and retail services, to manufacturing and warehousing. [IP Phone Warehouse](#) carries a complete line of [Spectralink wireless phones](#), and now offers the new Spectralink 8441 and 8453 WiFi phones, and new DECT phone systems.

Spectralink's 8400-series WiFi phones connect to compatible wireless access points to provide mobile VoIP, roaming and UC solutions to an on-site workforce. All [Spectralink WiFi phones](#) are certified for water, dust and shock-resistance.

What separates the Spectralink 8441 and 8453 wireless VoIP handsets from the 8400-series is the included Spectralink "SAFE." When integrated into an existing infrastructure, Spectralink SAFE can alert others when the user presses the panic/duress button or uses the tear-off string-triggered "man down" alarm built into the phones. Onboard sensors can detect and send a notification regarding unusual motion such as running or no movement from the user, as well as unusual tilting of the device.

The Spectralink 8453 phone also includes a barcode scanner to increase mobile productivity. The barcode scanner is compatible with industry-standard 1D and 2D types, including EAN and UPC barcodes.

New [Spectralink DECT phones](#) include handsets for office environments and manufacturing facilities. The colorful Butterfly-series DECT phones deliver basic call functions and easy-to-use interfaces for office personnel. More intensive models, such as the higher-end 7000-series models, offer features such as ATEX and MET certification for use in potentially explosive environments. Spectralink DECT servers, base stations and repeaters are also available to extend the system's wireless reach.

New Productivity-Driven Spectralink Wireless Phones from IP Phone Warehouse

Written by Australian Business

IP Phone Warehouse and Spectralink understand that quality and longevity of the product are important.
