®, the leading provider of WAN Optimization as-a-Service, Network as-a-Service, Application Delivery as-a-Service and Cloud Network as-a-Service, today announced that Vidyaranya Maddi, Senior Director, Service Delivery, will be speaking about the changing enterprise network requirements and the need for a simplified WAN at the Interop in Mumbai 2013 on Wednesday Nov 20. Aryaka will also be exhibiting at

[Interop Mumbai 2013](#)

at Booth #C12 from November 20 – 22, 2013.

Session Details: [O.N.E - One Network for the Enterprise](#)

Description: Enterprise IT managers today are burdened with multiple challenges. They need more bandwidth on their WAN, and application acceleration, reliability and performance predictability. And they need this both between their own enterprise locations and while accessing Internet-based SaaS and public Cloud services. The traditional approach to the challenge of reliable application performance over the WAN has been to have distinct solutions- MPLS connections for reliable site-to-site connectivity, augmented with the deployment of WAN Optimization boxes for application performance and an ADN/CDN provider to accelerate the applications outside the firewall.

In this session, Vidyaranya Maddi, Senior Director at Aryaka Networks, will discuss a new solution of having one network for any application, any location. This solution is a fundamental architectural shift in the delivery of WAN acceleration functionality, providing a comprehensive, cloud-based solution, leveraging a single architecture and core network.

When: Wednesday, Nov 20 at 3:00 p.m. IST

Where: Bombay Convention & Exhibition Center, Conference Hall 1

About Aryaka: Aryaka delivers application and network performance for the globally distributed enterprise for better collaboration, communication and business productivity. Aryaka eliminates the need for costly WAN appliances or long-haul private links. Aryaka's premier
