

Hydra Releases Hydra2014

Written by Australian Business

(PRLEAP.COM) United Kingdom - Project and resource management solutions leader, [Hydra](#) , announced the release of its flagship PPM software platform, Hydra 2014, this week. The highly anticipated update to Hydra's signature project management tool will build on existing functionality and management optimization with an improved user interface and multiple power user features.

Already a recognized leader, the release of Hydra2014 will confirm that Hydra is the go-to source for resource planning and management," said Manfredi Bargionia, Vice President of Marketing. "We developed Hydra2014 based on user feedback, industry trends, and forward-looking projections. We are proud of this product; we believe it will prove to be an indispensable tool for users, and once released, will be the best project management software available."

With trends including online project management and digitally versatile, integrated resource management systems, Hydra2014 is updated to create seamless project management software implementation and provide users with power functionality features, including:

Project register Portfolio-integrated team resource organization and management Native integration with Agile tools: Jira and Team Foundation Server Project Management Office (PMO) compliance dashboard Industry trends have included an increased size of project portfolio sizes and complexity, a focus on efficient resource utilization, and a high demand for digital, integrated online project management capacity. Hydra2014 based its product development on user feedback, data analysis, and best practice forecasts for 2014.
