

( [PRLEAP.COM](http://PRLEAP.COM) ) Hayden, ID – Systems Technologies, a leading provider of wireless nurse call systems, today reported record sales of its VisionLink® Nurse Call Systems. Vision Link is used in continuing care retirement communities (CCRC), long term care, assisted living, hospitals and senior communities where it is highly prized for its unique ability to meld many patient technology systems into one centralized system which provides patient focused care with superior facility management.

VisionLink is one of System Technologies best selling products because it enhances the care level in any size facility or community – from a single building to a hundred plus acre campus – and is flexible to adapt to the changing needs of a healthcare facility. Vision Link is UL1069 Edition 7 listed for skilled and acute care and will seamlessly integrate with smoke and motion detectors, wandering patient door equipment, pocket pagers, wireless phones, two way radios, IPAD's, cell phones, email, central station monitoring and other software and hardware options, giving both patients and caregivers safety and freedom.

The system also offers a unique feature sought out by many healthcare facilities. Through the VoiceLink feature staff members can talk to residents in their rooms, hands free, in addition to wirelessly receiving resident alarms. Any message typed on a computer keyboard can be sent directly to the wireless communication device carried by the individual caregiver or employee group offering staff a way to receive important notifications of holding calls, emergencies or other information without the noise of overhead paging.

To learn more about adding automatic fall alarm, wandering patient notification, statistical call analysis reports or other features, visit <http://www.wirelessnursecall.com/> or call 1-888-826-3394.

About Systems Technologies: Since 1994 Systems Technologies has been an industry leader in the design and manufacture of wireless nurse call and emergency call systems for healthcare and emergency services and the first ever to obtain a UL1069 listing for "Hospital Signaling and Nurse Call Equipment". To date over 2,500 senior living communities across North America have trusted Systems Technologies with their resident safety and security. Our mission is to improve resident and staff safety within the healthcare community by providing high tech monitoring, detection and notification services and devices and to improve the security and health of caregivers, staff, patients and residents through technology solutions that focus on improving the quality of life and giving people easier access to help when they most need it.
