

Westbrook Technologies Announces New Software Releases for Fortis and FortisBlue

Written by Australian Business

(PRLEAP.COM) Branford, CT – Westbrook Technologies, Inc., a leading developer of enterprise content management (ECM) software, today announced new releases of its Fortis (2.6) and FortisBlue (2.2) software. Both releases add new features, improve performance, and offer even greater ease of use for administrators and end users. With powerful electronic capture, storage and organization of documents, data and content, Fortis and FortisBlue provide a cost-effective solution for going paperless and automating business processes.

"The enhanced functionality of our Fortis and FortisBlue product lines will help organizations keep pace with the demands for greater efficiency, more rigorous data and system security, and improved mobile access," said Thomas Schneck, CEO of Westbrook Technologies. "For example, Fortis and FortisBlue eForms now offer tablet and smartphone friendly features including the ability to attach pictures taken with these devices, touchscreen signatures, and use of GPS coordinates to prefill an address."
