        (PRLEAP.COM) Anaheim Hills (May 15, 2014) – The Small Business Administration is celebrating National Small Business Week from May 12-16. SACA Technologies, a provider of managed IT services based in Southern California, is joining the celebration by offering free email encryption to new SMB clients. This is part of a larger effort to raise awareness of the importance of email security for small businesses.

"Throughout our 17 years of service we have witnessed the devastating effects that email attacks can have on small and medium sized businesses," said Alexander Saca, CEO of SACA Technologies. "Email is a weak spot for many small businesses that exchange unprotected messages with clients and providers. Many assume that they are safe enough, until their important data is compromised. Events like these can leave a real dent in an SMB's budget."

Saca wants to shed light on the importance of email security for small and medium sized businesses by encouraging practices such as hosted email encryption. "With technologies such as hosted email encryption, businesses can rest assured that their communications are protected. Email encryption used to be complex, dissuading users and exposing their data to online threats. Now, we offer hosted email encryption, which allows for the encryption keys to be stored centrally, and to be managed automatically."

SACA Technologies is offering free email encryption to all businesses that sign up for their managed IT services between now and the end of the month. To take advantage of this offer for small businesses call SACA Technologies at 888-603-9030 or visit www.sacatech.com.
